

Average piece lengths on the products Tapetex 65-66-67-68

E.031709.v3

The information on the piece lengths in textile wallcovering can only be an indicative average. We cannot guarantee a fixed piece length because of multiple variables in textile, such as:

- The lengths of the weaving rolls from a loom vary.
- The length in dyeing and the different finishing treatments vary.
- The handling and weight limits in transport are approx. 25 kg (approx. 53 lbs), which results in different target lengths seen the great variety in weight for the individual qualities.
- Generally the individual rolls are continuous and not rolled together.
- Because of weaving direction and control of color it is best to supply and hang in the sequence of production.
- Notwithstanding a given target length, we may cut a roll on a fault even if the target length is not reached. The faults are marked with red tape and allowance is automatically added.

Therefore we cannot give any guarantee on the length of a piece.
